Parakeet Café

SALES FORECAST · OCTOBER 2026

2027 Sales Forecast

Prophet, SARIMA and Holt-Winters, tested head-to-head on four years of Toast sales from our eleven cafés.

Toast POS net sales via MCP Andersons · 14,239 café-days · Sep 2022 – Oct 14, 2026
Prepared October 15, 2026

2027 net sales: $33.1M, +14% on 2026

We forecast each café's sales with three time-series models, scored them in five back-tests, and recommend the average of the three, which was the most accurate on every measure.

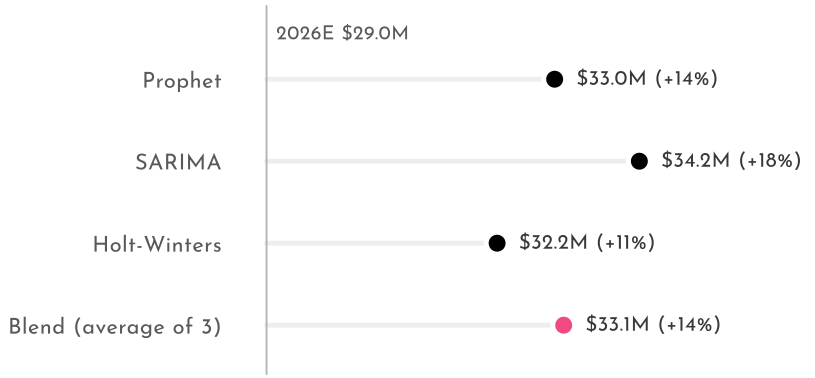

$33.1M

2027 net sales forecast · blend of Prophet, SARIMA and Holt-Winters · existing 11 cafés

2025 actual	2026 estimate	2027 model range
$25.2M	**$29.0M**	**$32.2–34.2M**
+22% vs 2024	+15% vs 2025	+11% to +18%

2027 forecast by model

Net sales, 11 cafés · % change vs 2026 estimate

01 **The flock keeps growing.** 2026 is landing near $29.0M (+15%). Like-for-like sales are up +15% this year on +13% more checks: the growth is traffic, not price.

02 **The three models agree within a narrow band.** Prophet $33.0M, SARIMA $34.2M, Holt-Winters $32.2M: all expect another year of double-digit growth (+11% to +18%).

03 **The back-tests favor the blend.** Holt-Winters was the best single model, a nose ahead of Prophet (9.4% vs 9.7% café-month error). Averaging all three cut the brand's monthly error to 2.1% and missed period totals by 1.3% on average.

04 **Plan on $33.1M, with $32.2M as the conservative case.** New cafés (Manhattan Beach, Studio City, Enclave) are not in the number. Our last four openings each added $1.4M–2.9M in their first year.

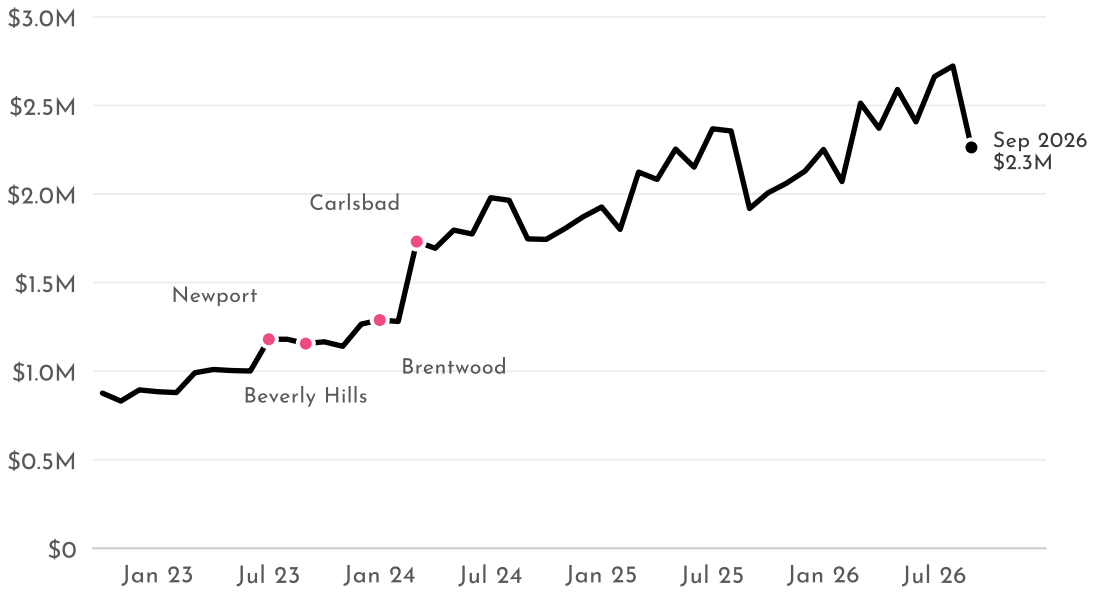

LIVE CHECK October 1–14, 2026, after the data the models were trained on: Toast recorded $1.08M and the blend forecast was −1.7% off (Prophet −1.7%, SARIMA −0.8%, Holt-Winters −2.7%).

Four years of growth: first new cafés, now the same cafés

Sales stepped up as Newport, Beverly Hills, Brentwood and Carlsbad opened in 2023–24. No café has opened since March 2024, so nearly all of the gains in 2025 and 2026 came from the same eleven cafés selling more.

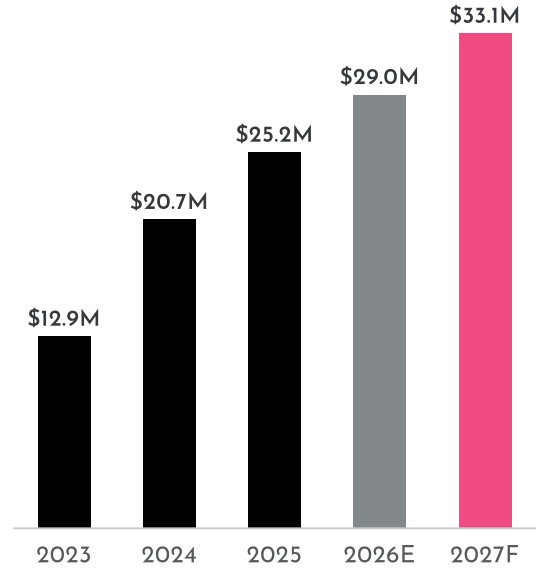

Monthly net sales, all cafés

Oct 2022 – Sep 2026 · pink dots mark café openings

Annual net sales

2026E = Jan–Sep actual + Q4 forecast · 2027F = blend

LIKE-FOR-LIKE GROWTH: SAME CAFÉS, SAME MONTHS

PERIOD	CAFÉS	NET SALES	CHECKS (TRAFFIC)	AVG. CHECK	AVG. CHECK ($)
Jan–Sep 2024 vs 2023	7	**+10.4%**	+0.1%	+10.4%	$23.31
Jan–Sep 2025 vs 2024	9	**+19.6%**	+11.3%	+7.5%	$25.81
Jan–Sep 2026 vs 2025	11	**+15.1%**	+13.2%	+1.7%	$26.64

The mix of growth has shifted. In 2024 it was all price (+10% average check, flat traffic). In 2026 it is almost all traffic (+13% checks, +2% average check). Busier cafés are a sturdier base for 2027 than price alone.

Like-for-like = cafés trading the full Jan–Sep period in both years · checks = Toast checks

Three ways to read the same history

Each model is fitted to every café separately and the eleven forecasts are added up, so a new opening is never mistaken for organic growth. The models differ mainly in how they extend the trend.

REQUESTED MODEL · META

Prophet

Splits daily sales into a trend, a weekly rhythm, a yearly season and holiday effects, then extends each one.

SEES

Daily sales per café, so weekends and holidays are learned directly (Mother's Day +59%, Memorial Day +39%, Christmas Eve −17%).

ASSUMES ABOUT GROWTH

The recent trend continues in a straight line, adding similar dollars each year.

WATCH-OUT

Ran about 2% hot on average in the back-tests.

BACK-TEST SCORE

9.7% café-month error · 3.6% brand monthly error

$33.0M 2027 · +14%

CLASSIC STATISTICS · BOX-JENKINS

SARIMA

Seasonal ARIMA: next year looks like last year, scaled by the café's average year-on-year growth.

SEES

Monthly sales per café, adjusted for how many Saturdays, Sundays and closed days each month has.

ASSUMES ABOUT GROWTH

The café's average year-on-year growth rate carries on, compounding.

WATCH-OUT

Least precise café by café; the most optimistic forecast for 2027.

BACK-TEST SCORE

11.6% café-month error · 3.4% brand monthly error

$34.2M 2027 · +18%

CLASSIC STATISTICS · EXPONENTIAL SMOOTHING

Holt-Winters

Tracks a level, a trend and a seasonal pattern, giving the latest months the most weight.

SEES

The same trading-day-adjusted monthly sales as SARIMA.

ASSUMES ABOUT GROWTH

A damped trend: growth continues but gradually flattens out.

WATCH-OUT

The most conservative model; under-forecast in four of five back-tests.

BACK-TEST SCORE

9.4% café-month error · 3.3% brand monthly error

$32.2M 2027 · +11%

SAME DATA

Toast net sales for 11 cafés, Sep 2022 to Sep 2026; models fitted on data through Sep 30, 2026.

SAME CLEAN-UP

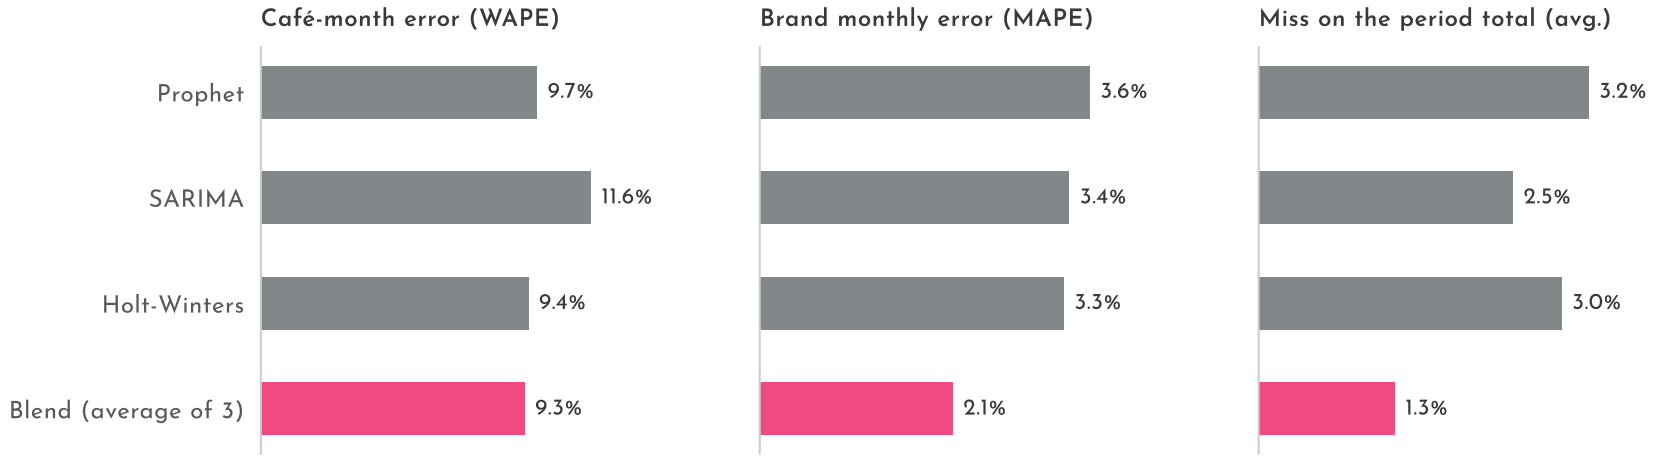

One-off disruptions are removed from training (Tropical Storm Hilary, Aug 2023; the LA fires at Brentwood, Jan 2025; closure days) but still count as actual sales in every test.

SAME SCORING

Every model faces the same five back-tests and is judged against real Toast sales.

Five dress rehearsals: which model would have called it?

We rewound the clock five times (Sep 2024, Dec 2024, Mar 2025, Jun 2025, Sep 2025). Each time, every model saw only the data known on that date and forecast months 4 to 15 ahead, the same gap that separates today from 2027. That gave 393 café-months to score against what Toast actually recorded.

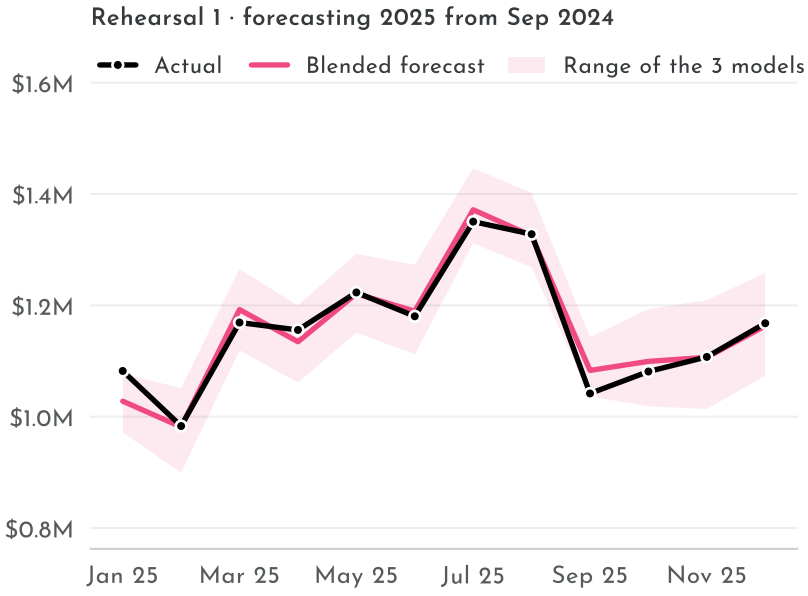

MODEL	CAFÉ-MONTH ERROR (WAPE)	BRAND MONTHLY ERROR (MAPE)	AVG. MISS ON PERIOD TOTAL	WORST MISS ON PERIOD TOTAL	AVERAGE BIAS
Prophet	9.7%	3.6%	3.2%	6.8%	+2.2% over
SARIMA	11.6%	3.4%	2.5%	6.0%	-1.8% under
Holt-Winters	9.4%	3.3%	3.0%	5.7%	-2.3% under
Blend (average of 3) BEST	**9.3%**	**2.1%**	**1.3%**	**2.5%**	**-0.6% under**

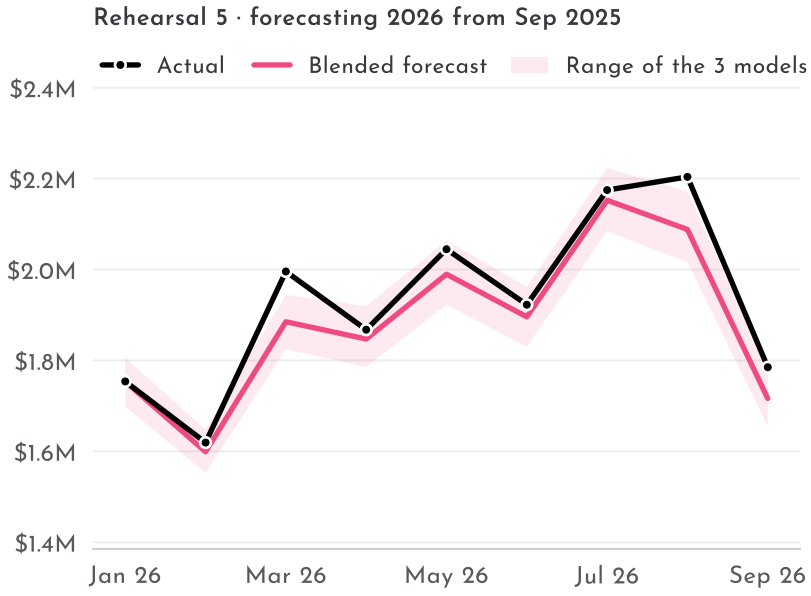

Lower is better. WAPE = total absolute error ÷ total sales, over all café-months. MAPE = average % error of the 11-café monthly total. Period total = the 12 months each rehearsal covered (9 for the last one).

Verdict. Holt-Winters is the most accurate single model month to month, a nose ahead of Prophet; the two are effectively tied café by café. SARIMA is the best of the three on period totals but the least precise café by café. Prophet tends to run a little hot and Holt-Winters a little cold, so their errors partly cancel. **The blend beat every single model on every measure**, and its worst miss on a period total was 2.5%.

The rehearsals up close

Rehearsals 1 and 5 bracket the test: the oldest forecast, made with two years of history, and the newest. The shaded band is the spread between the three models; the pink line is their average.

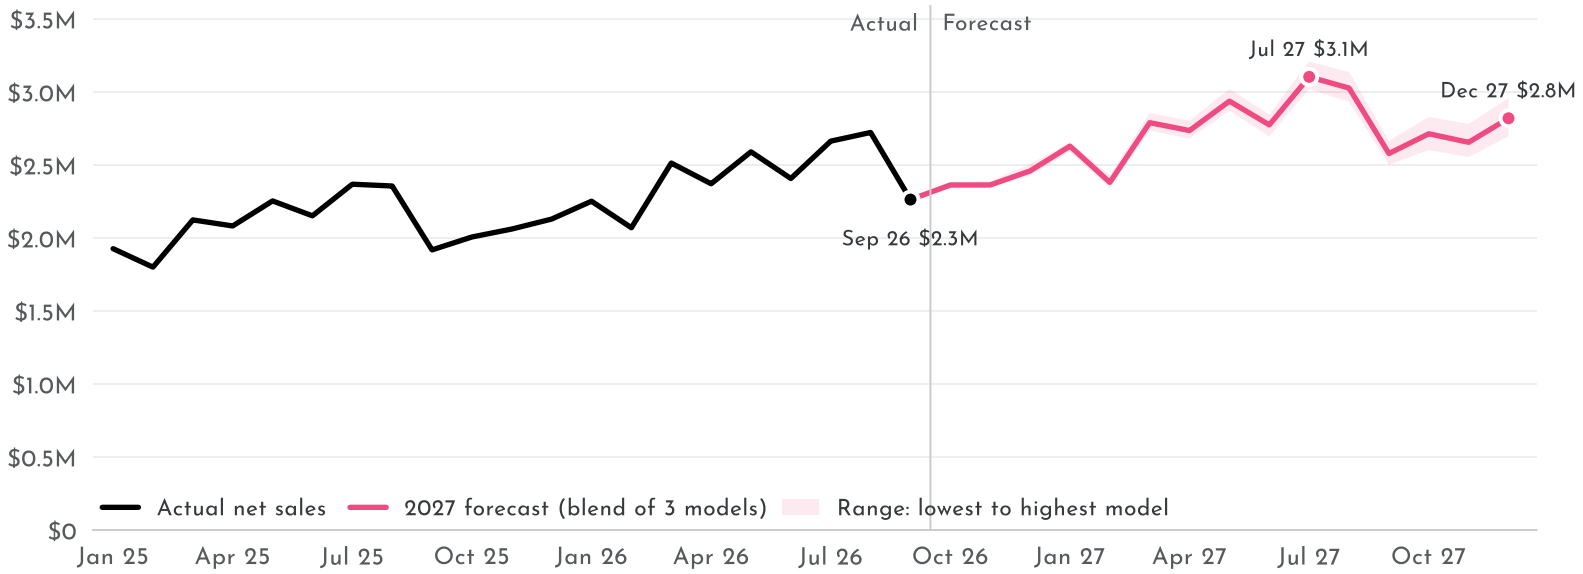

MISS ON THE PERIOD TOTAL, BY REHEARSAL

REHEARSAL (DATA THROUGH)	CAFÉS	MONTHS	PROPHET	SARIMA	HOLT-WINTERS	BLEND
1 · Sep 30, 2024	5	12	+6.8%	-6.0%	-0.2%	**+0.2%**
2 · Dec 31, 2024	7	12	+2.8%	-3.3%	-4.6%	**-1.7%**
3 · Mar 31, 2025	7	12	+1.8%	-1.5%	-2.5%	**-0.7%**
4 · Jun 30, 2025	7	12	+2.0%	+0.9%	+1.8%	**+1.6%**
5 · Sep 30, 2025	9	9	-2.7%	+0.9%	-5.7%	**-2.5%**

Live check, October 1–14, 2026. These two weeks came after the data the final models were trained on. Toast recorded $1.08M; the blend forecast was −1.7% off (Prophet −1.7%, SARIMA −0.8%, Holt-Winters −2.7%).

2027, month by month

The seasonal shape holds: a March lift, a July–August summer peak, then the September dip. Every month of 2027 is forecast 11%–17% above the same month of 2026.

$ THOUSANDS	JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	OCT	NOV	DEC	2027
Prophet	2,643	2,370	2,776	2,724	2,920	2,780	3,081	3,011	2,568	2,710	2,630	2,805	$33.02M

2027, café by café

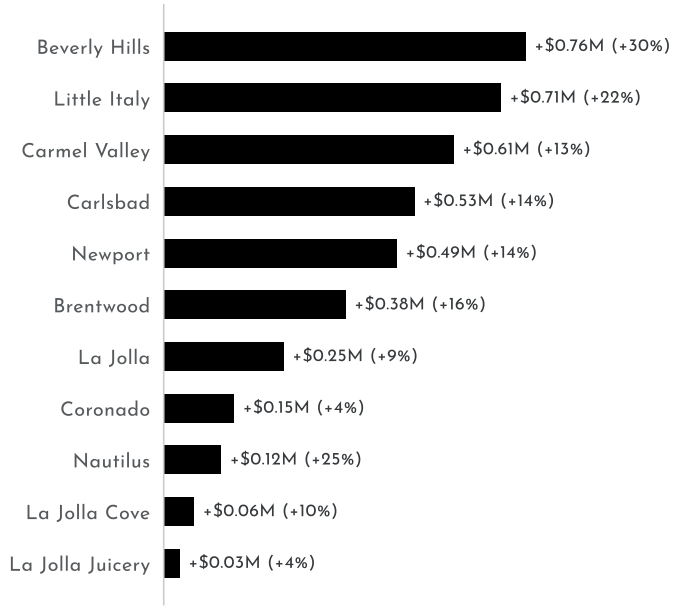

Beverly Hills, Little Italy and Carmel Valley deliver 51% of the $4.1M of growth. Coronado and the La Jolla Juicery are the slowest, at under +5%.

CAFÉ	REGION	2025 ACTUAL	2026 ESTIMATE	2027 FORECAST	VS 2026	MODEL RANGE (LOW–HIGH)	SHARE OF 2027
Carmel Valley	San Diego	4.24	4.68	**5.29**	+13%	5.09–5.49	16%
Carlsbad	San Diego	3.34	3.76	**4.29**	+14%	4.16–4.37	13%
Coronado	San Diego	3.53	4.00	**4.15**	+4%	3.98–4.32	13%
Newport	Orange County	3.18	3.50	**4.00**	+14%	3.85–4.08	12%
Little Italy	San Diego	2.57	3.26	**3.98**	+22%	3.90–4.08	12%
Beverly Hills	Los Angeles	1.91	2.58	**3.34**	+30%	3.06–3.59	10%
La Jolla	San Diego	2.74	2.90	**3.15**	+9%	3.04–3.27	10%
Brentwood	Los Angeles	1.87	2.33	**2.71**	+16%	2.53–2.98	8%
La Jolla Juicery	San Diego	0.79	0.89	**0.93**	+4%	0.89–1.00	3%
La Jolla Cove	San Diego	0.65	0.63	**0.70**	+10%	0.60–0.82	2%
Nautilus	San Diego	0.37	0.49	**0.61**	+25%	0.57–0.64	2%
All cafés		**25.18**	**29.04**	**33.14**	**+14%**	**32.22–34.19**	**100%**

$ millions, net sales. Model range = lowest and highest of Prophet, SARIMA and Holt-Winters for that café (café ranges do not add up to the total range).

Where the extra $4.1M comes from

2027 forecast minus 2026 estimate, by café

What could ruffle the forecast

The models know only the past. They see no new cafés, price changes or local events, and they assume the habits of 2024–26 continue. These four things would move the 2027 number.

NEW CAFÉS ARE UPSIDE

+$2.0M

average first-year sales of a new café

Manhattan Beach is set up in Toast and Studio City and Enclave in R365, but none has sales yet, so none is in the forecast. Recent openings did Newport $2.4M, Beverly Hills $1.4M, Brentwood $1.5M, Carlsbad $2.9M in their first 12 months. Add each one, prorated by the months it trades in 2027.

MOMENTUM IS THE BIG BET

$31.4M

2027 if like-for-like growth cools to +8%

All three models extend like-for-like growth of +10%, +20% and +15% (2024–26). If 2027 growth slows to +8%, sales land near $31.4M, just below the lowest model. Track like-for-like monthly from January.

GROWTH IS CONCENTRATED

51%

of 2027 growth comes from three cafés

Beverly Hills (+30%) and Little Italy (+22%, stepped up in March 2026) lead. If both grew +10% instead, 2027 would land near $32.3M, about where Holt-Winters sits.

PRICE IS AN OPEN LEVER

+1.7%

average check, Jan–Sep 2026 vs 2025

2026 growth is traffic. The average check was nearly flat at $26.64. The models only extend sales trends and know nothing about menu prices, so a 2027 price increase is a lever on top of this forecast, provided traffic holds.

2027 under different assumptions

Net sales, existing 11 cafés unless stated · % vs 2026 estimate

HOW TO USE IT

Budget at **$33.1M** (the blend), with Holt-Winters' **$32.2M** as the conservative case and SARIMA's **$34.2M** as the stretch. Add new cafés on top as their opening dates firm up.

WATCH FIRST

Q1 2027 like-for-like against the forecast's +14%. A gap of more than 3 points is the signal to revisit.

KEEP IT FRESH

Re-run monthly as Toast data lands; the full pipeline (extract, back-test, forecast, this report) runs in minutes from the repo.

* Illustrative: half of the average first-year sales of our last four openings ($1.0M); opening dates are not yet set

Method and data

DATA

Toast POS tables in the Grupo Anderson's BI warehouse, read through MCP Andersons. Net sales follow the official *silver.v_toast_sales_daily* definition: check amounts on non-voided, non-deleted checks and orders, minus Toast gift-card sales. 14,239 café-days ($84.8M) from Sep 7, 2022 to Oct 14, 2026, validated month by month against checksums computed in SQL.

MODELLING WINDOW

Toast history starts with the Sep 2022 POS migration, so modelling starts Oct 2022. Cafés opened since then skip their 2–4 week opening ramp. Nautilus (a weekday corporate-campus café) trades Monday–Friday and closes on five holidays; the forecasts respect that calendar.

ONE-OFF DISRUPTIONS

- All cafés: Aug 20, 2023 (Tropical Storm Hilary closures)
- Brentwood: Jan 7–25, 2025 (Los Angeles wildfires)
- La Jolla: Jul 8, 2025 (unplanned closure)
- La Jolla Juicery: Jul 8, 2025 (unplanned closure)
- Little Italy: Jun 11–18, 2025 (closures)
- Little Italy: Sep 29–30, 2025 (closures)
- Any other day below 25% of the café's 29-day median (partial closures)

Excluded from Prophet's training; imputed (same weekday, nearby weeks) for the monthly models; kept in the actuals used for scoring.

PROPHET

Daily net sales per café. Linear trend (changepoint prior 0.05), multiplicative weekly and yearly seasonality (10 Fourier terms), US federal holidays plus Valentine's Day, Easter, Mother's and Father's Day, Black Friday, Christmas Eve and New Year's Eve. Monthly totals = sum of daily forecasts on trading days.

SARIMA

Monthly log sales rate per café (sales ÷ weekday-weighted trading days). Seasonal differencing with drift (average year-on-year growth). Order chosen by AICc from six candidates; the selected order for each café is listed on the next page.

HOLT-WINTERS

Same monthly rate. Additive damped trend, multiplicative seasonality (12 months); smoothing parameters and initial states estimated by least squares.

BLEND

Simple average of the three, café by café and month by month, with equal weights (not tuned).

IS PROPHET SET UP FAIRLY?

We kept Prophet's standard settings and checked four common alternatives on the same back-tests. No alternative wins on every measure. A stiffer trend helps the brand total but hurts accuracy café by café, so the default stands.

PROPHET SETTING	WAPE	MAPE	AVG. MISS
Multiplicative, default trend · used	**9.7%**	**3.6%**	**3.2%**
Additive seasonality	10.3%	4.4%	3.9%
Multiplicative, stiffer trend (cps 0.01)	10.1%	2.2%	1.5%
Multiplicative, flexible trend (cps 0.25)	11.5%	5.8%	5.7%
Log sales, additive (exponential growth)	13.2%	6.9%	6.6%

READING THE RANGES

The low–high model range is the practical planning band. Each model's own 80% interval for the 2027 total (in *forecast_annual.csv*) ranges from ±1% for Prophet to ±7% for Holt-Winters. They disagree too much, and Prophet's is far tighter than its back-test misses, so we don't headline them.

REPRODUCE

python src/backtest.py → python src/prophet_sensitivity.py → python src/forecast_2027.py → python report/build_report.py. Data refresh: *data/sql/extract_parakeet_daily.sql* via MCP Andersons.
